Project Overview:

Project Name: iMovies: Cinema Ticket Booking Platform

Description: iMovies is a web-based movie platform developed using the MERN stack (MongoDB, Express.js, React.js, and Node.js). It provides users with a user-friendly interface for browsing movies and viewing movie-related information. Depending on the features implemented in the current version, users can explore movie details, view posters, search for movies, and access booking-related functionality.

The application uses a database to store movie and application data. Testing is required to verify the functionality of the user interface, communication between the frontend and backend, database operations, authentication, and any implemented booking-related features.

Project Version:v1.0.0

Testing Period: 23-10-2026 to 25-10-2026

Testing Scope:

- User registration and login
- User authentication and session management
- Movie catalogue display
- Movie posters, titles, descriptions, and other movie details
- Movie search and filtering, if implemented
- Movie details page functionality
- Frontend and backend communication
- Database connectivity and movie data retrieval
- Admin access and movie management, if implemented
- Booking and seat selection, if implemented
- Payment or QR-code flow, if implemented
- Input validation and error handling
- Interface responsiveness and usability
-

Requirements to be Tested:

- As a user, I want to register and log in so that I can access the application's available features.
- As a user, I want to browse movies so that I can explore the available movie collection.
- As a user, I want to view movie details so that I can learn more about a selected movie.
- As a user, I want movie posters and information to display correctly so that I can identify movies easily.
- As a user, I want to search for movies, if the feature is available, so that I can find a particular movie quickly.
- As a user, I want the application to handle invalid inputs correctly so that errors do not interrupt normal use.
- As an administrator, I want to manage movie information, if the feature is implemented, so that the catalogue remains updated.
- As a user, I want the application to retrieve and display data correctly from the database.

Testing Environment

- **URL**: https://imovies-lemon.vercel.app/
- Application URL: Local development URL or deployed URL to be filled in.
- Frontend: React.js
- Backend: Node.js and Express.js
- Database: MongoDB / MongoDB Atlas, depending on the configured environment
- Development Environment: Visual Studio Code or the IDE used for the project
- Browser: Google Chrome or another supported browser
- Credentials: Use the test accounts created for the application.
-

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	User Registration	1. Open the application. 2. Click Sign Up/Register. 3. Enter valid user details. 4. Submit the form.	[Describe the expected outcome]	Account created, redirected to dashboard	[Pass/Fail]
... TC-002	... Post a Job	... 1. Login as client 2. Go to "Post	...Job appears on homepage	...	...

	(Client)	Job" 3. Submit form			

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Error on job posting form	1. Login as client 2. Submit empty form	Medium	Open	Form should show validation
...	...	...	...	...	...

Sign-off:

Signature: Saleel

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
